### Cleft Care at Home | Smile Train

Cleft lip and cleft palate occur when tissues in the baby's face and mouth don't fuse properly. Normally, the tissues that make up the lip and palate fuse together in the second and third months of pregnancy. But in babies with cleft lip and cleft palate, the fusion never takes place or occurs only part way, leaving an opening (cleft).

### Cleft lip and cleft palate - Symptoms and causes - Mayo Clinic

Surgically closing a cleft lip is simpler than repairing a cleft palate. The procedure is usually performed within three to four months after birth, and the scar usually fades as the child gets older. With a cleft palate, surgery is delayed until the child is one to two years old, when the upper jaw has

reached normal growth.

### **What is Cleft Lip and Cleft Palate | Colgate® Oral Care**

Cleft palate. Cleft palate is a condition in which the two plates of the skull that form the hard palate (roof of the mouth) are not completely joined. The soft palate is in these cases cleft as well. In most cases, cleft lip is also present. Palate cleft can occur as complete (soft and hard palate, possibly including a gap in the jaw) or incomplete (a 'hole' in the roof of the mouth, usually ...
