Algebraic topology is a tough subject to teach, and this book does a very good job. Some prerequisites, however, are essential: * point set topology (e.g. in Munkres' Topology) * Abstract algebra * Mathematical maturity to be willing to follow a definition and argument even when it seems like a weird side-track

This course will introduce basic concepts of algebraic topology at the first-year graduate level. We will follow mostly the book Elements of Algebraic Topology by James R.–Munkres , and cover in a fair bit of detail the topics on homology of simplicial complexes, relative homology, cohomology, and the basics of duality in manifolds (selected Sections from Chapters 1–5 and 8).
