Generac's G-Force engine is the only engine on the market with full FLOW OIL FILTRATION, ensuring that oil is immediately present at the start of the engine and allowing the engine to quickly take on load. While competitive engines rely on splash lubrication, the engine provides filtered, pressurized oil to the main and rod bearings, improving the durability of the engine and ensuring longer engine life.

This is a very common complaint and in fact I drained a couple today that had the same issue. The only thing you can do to reduce/eliminate the problem is to run the unit loaded for extended tests to try and 'burn off' the condensation. Basically the engines don't get hot enough, sometimes even during outages, to get the oil past the boiling point of water to vaporize the moisture out.
