As indicated in book three of the division of labour however, Durkheim felt that social facts exhibits both normal and pathological forms; and he now added that it was an important part of sociological method to provide rules for distinguishing between them. It is important to determine whether the social fact in question is normal or not. The criteria suggested by Durkheim for distinguishing normal from pathological social facts are statistical and structural, not moral.

To assess the presence of Cx37 during normal mouse development, we first screened total RNA extracted from the heart of embryos at different developmental stages, using a RT-PCR approach. As shown in Figure 3 , from stage 11 ed. onwards, primers specific for Cx37 allowed for the amplification of a 410 bp product, indicating the expression of a transcript coding for this gap junction protein.
