PIPESIM 2015 is the third release of the third-generation user interface and has approximately 85% feature parity with the legacy PIPESIM user interface (PIPESIM 2012.3). Notable exceptions include network optimization, wax deposition, rod pump design, local language support, OpenLink extensibility, and integration with IAM field development planning and operations software.

PIPESIM 2015.1 and 2012.3 - Schlumberger Software

PIPESIM 2015 enables users to specify both the total gas lift injection rate and the injection pressure to calculate a tuning factor to ensure valve performance equations match observed data. This tuning factor can be applied to the valve system for more accurate modeling. Additional improvements include

The PIPESIM simulator offers the industry's most comprehensive steady-state flow assurance workflows for front-end system design and production operations. The flow assurance capabilities of the simulator enable engineers to ensure safe and effective fluid transport—from sizing of facilities, pipelines, and lift systems, to ensuring effective liquids and solids management, to well and pipeline integrity.
