PROTEOMICS INTRODUCTION

Download File PDF Proteomics And Protein Protein

PROTEOMICS is the study of the proteome, the full protein complement of organisms e.g. plasma, cells and tissue. PROTEOMICS is the large scale study of proteins, particularly their structures and functions Understanding the proteome allows for:

Characterisation of proteins

Understanding protein interactions

or organelle, determine their localization, and characterize all protein-protein interactions. The major goal of these studies is to map out the structure of protein complexes or cellular organelle proteins (Blackstock and Weir, 1999).

Proteomics: Basic Concepts,

Download File PDF Proteomics And Protein Protein

Technology and Applications

Protein-protein interaction plays key role in predicting the protein function of target protein and drug ability of molecules. The majority of genes and proteins realize resulting phenotype functions as a set of interactions. The in vitro and in vivo methods like affinity purification, Y2H (yeast 2 hybrid), TAP
