Debt Deflation - Investopedia
Debt deflation is a theory that recessions and depressions are due to the overall level of debt rising in real value because of deflation, causing people to default on their consumer loans and mortgages. Bank assets fall because of the defaults and because the value of their collateral falls, leading to a surge in bank insolvencies, a reduction in lending and by extension, a reduction in spending.

THE DEBT-DEFLATION THEORY OF GREAT DEPRESSIONS BY IRVING FISHER INTRODUCTORY IN Booms and Depressions, I have developed, theoretically and sta-tistically, what may be called a debt-deflation theory of great depres-sions. In the preface, I stated that the results "seem largely new," I spoke thus cautiously because of my unfamiliarity with the vast

Debt-Deflation Theory of Great Depressions
Debt deflation is a theory based on the principle of the correlation between the debt burden and the price level in a country. Deflation has the effect of significantly reducing the debt burden. Conversely, a price increase leads to an increase in the debt burden. This is the theory put forward by its creator Irving Fisher in 1933.

What is debt deflation?
The theory of debt deflation is a macroeconomics concept pertaining to rising debt levels and their negative impact on the economy. The theory proposes that when the level of prices across consumer goods and services continuously drops, debt levels increase, and a period of financial instability results, eventually leading to a recession.
